

# ARCTIC ICE

## COLD THERAPY SYSTEM

The Arctic Ice Cold Therapy system helps reduce pain and swelling and facilitates rehabilitation through continuous circulation compression cryotherapy. The cold therapy system continuously circulates cool water around the treatment area while providing compression to reduce pain and swelling.

### Features:

- Cool water is circulated 360° around the treatment area providing optimal cooling.
- Cold therapy system provides 3-4 hours of treatment on one single fill of ice and water.
- Cold therapy system can be used continuously, without interruption.
- Continuous circulation of cool water around the treatment area, reduces the chance of skin damage which is often associated with traditional ice therapy.
- Cold therapy system reduces the mess of traditional ice therapy and allows movement of the treatment area without losing the benefits of cold therapy.
- Comfortable, Easy to Use and Portable.

System is compatible with a choice of therapeutic pads or boot (sold separately).

### Indications for Use:

- The Arctic Ice Cold Therapy system is effective for management of post-operative or post-traumatic pain, edema.
- Cold water therapy system causes local vasoconstriction of blood vessels; lowers metabolism, reduces vascular permeability to reduce internal flow of fluids.
- Chronic Pain - Cold therapy device blocks or slows transmission of pain.
